EDUCATION

Stanford University

Conferring: June 14, 2026

- B.S. Human-Computer Interaction (Symbolic Systems)
- M.A. Linguistics, thesis: "What Is 'Depressed Speech'? Investigating Response Time in Major Depressive Disorder Through Indexicality Theory"

TECHNICAL EXPERIENCE

UX Researcher — Autograph.ai, San Francisco, CA

January 2026 - April 2026

- Design and conduct ~5 weekly semi-structured interviews end-to-end (recruiting, moderation, synthesis) to diagnose usability issues and uncover systemic friction points
- Synthesize qualitative data using structured frameworks (e.g., affinity mapping) into clear, prioritized recommendations for engineers and product stakeholders
- Build and manage a "Pioneers Program" of 20 trusted early users, enabling rapid, iterative feedback cycles across product development in an early-stage, fast-paced product environment
- Identify and validate emerging use cases through user workshops and targeted research, informing roadmap decisions and product strategy

UX Engineering Intern — Pinterest, San Francisco, CA

June 2025 - September 2025

- Identified workflow bottlenecks through stakeholder interviews, then built a TypeScript/Node.js automation pipeline using the Figma REST API to streamline design-to-engineering handoff tracking
- Designed parsing logic to detect checklist compliance, extract scores/timestamps, and generate reports for design leadership
- Reduced monthly manual effort from 10 hours across 20 PMs to 10 minutes, improving efficiency and visibility

UX/UI Development Intern — UCSF, San Francisco, CA

February 2024 - December 2024

- Spearheaded design and development of a public-facing lab website disseminating healthcare policy research
- Translated designs from Figma and Notion into Drupal, UCSF's compulsory website design platform
- Ensured website content was accessible to broad audiences through iterative user testing with 36 participants

PROJECTS

QUEERx, CS147 & CS194H course project — Stanford University

September 2023 - March 2024

- Conducted 12 needfinding interviews with LGBTQ+ community members to identify barriers in accessing inclusive healthcare
- Synthesized findings into key insights that informed product direction and feature prioritization
- Increased task completion rates by 20% through iterative usability testing of task flows and design refinement

LEADERSHIP

Resident Assistant (RA) — Stanford University

September 2022 - June 2024

- Collaborated with 5 RAs to support first-year residential life through programming and student support
- Responded to high-stress situations, such as mental health crises, crimes, etc., by facilitating conversations with students, first responders, and Stanford admin as needed
- Co-managed three budgets totaling over \$52,000, including weekly verification of credit card transactions to ensure accuracy and financial integrity

SKILLS

Research: Interviews, usability testing, contextual inquiry, surveys, affinity mapping, heuristic evaluation

Tools & Technical: Figma, Qualtrics, Excel/Sheets, Notion, JavaScript, TypeScript, Node.js, Python, R
